

Intact Dynamic Replicator Release Notes

Release Overview

This set of release notes contains a product history of the Intact Dynamic Replicator (Intact D/R) product by Lund Performance Solutions, version E.02.01 to present.

Product History

The Intact D/R product history lists all significant modifications and enhancements made to the product since the last major release. The product changes are grouped according to version number.

Version E.02.01

Service Request #		Description
3705	Enhancement	Intact D/R now supports 250 databases instead of 50. In order for the customer to take advantage of the increased capacity, he/she must purge the existing configuration file with the <code>purgconf.intactix.lps</code> utility. It will prompt for the name of the configuration file, which is <code>config.intactix.lps</code> . Unfortunately when the configuration file is purged, all the information must be re-entered.
